SM 30 Series 30 mm Barrel Sensors

Datasheet

Opposed-Mode Infrared Photoelectric Sensors for Especially Demanding Applications

- Stainless steel or plastic barrel models
- Very high excess gain; 150 m (500 ft) sensing range; 880 nm Infrared LED
- Positive sealing eliminates even capillary leakage; lens is quad-ring sealed; exceeds NEMA 6P (IP67) ratings – ideal for equipment wash-down environments
 - EZ-BEAM®technology provides reliable sensing without the need for adjustment
 - Modulation frequency "A" is standard; frequencies "B" and "C" also available for preventing crosstalk in multiple-sensor applications (emitter and opposed receiver frequencies must match)
- AC- and DC-operated receiver models available; emitters feature Universal voltage
- Range for all models: 150 m (500 ft)

WARNING: Not To Be Used for Personnel Protection

Never use this device as a sensing device for personnel protection. Doing so could lead to serious injury or death. This device does not include the self-checking redundant circuitry necessary to allow its use in personnel safety applications. A sensor failure or malfunction can cause either an energized or de-energized sensor output condition.

¹ Any emitter and receiver shown here can be used together, if they have the same modulation frequency.

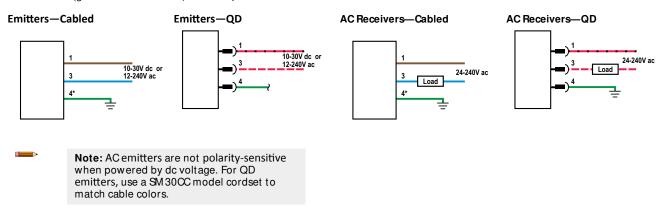

Sandard 2 m (6.5 ft) cable and integral QD models are listed. Models with a quick disconnect require a mating cordset. To order the 9 m (30 ft) PVC cable model, add the suffix "W/30" to the cabled model number. For example, SM 30PRLBW/30.

AC models with QD require SM 30CC model cables.
