

# WLB32 Industrial LED Light Bar (DC)

## Datasheet

Model without Motion Detector

Model with Motion Detector

Model with Eye Shield and Motion Detector

Banner's WLB32 is an ultra-bright LED fixture that features an even light output for a no glare 'glow'. Suitable for a variety of environments and applications, including work stations, machine lighting, control cabinets, and manufacturing lines, the WLB32 uses advanced LED lighting technology to provide a high-quality and maintenance free industrial lighting solution for years.

- Highly energy efficient for overall cost savings
- High/Low/Off switch
- Models with eye shield block side glare
- Daisy chain power to multiple lights
- Motion detection models available
- Metal housing, shatterproof window
- Easy installation with snap clips, or a choice of magnetic or angle brackets

WLB32 Industrial LED Light Bars are available as cascading models that can be "daisy-chained" together for a continuous length of lighting, with a minimum of wiring. Each light bar can be turned to high, low, or off independently of the other lights, upstream or downstream, in the chain. A double-ended accessory cordset must be used between each pair of cascading lights.

- To order the light without the integral switch, omit the "PB" from the model number. For example, WLB32C285Q.
- To order the light with the integral motion detector, replace the 'PB' from the model number with 'M'. For example, WLB32C285MQ.
- To order the light with the eye shield, add an 'E' after the length. For example, WLB32C285EPBQ.

**Application Note**

When connecting cascading lights in series it is important not to exceed the maximum current limitation of 4 Amps  
 Maximum length of light at 12 V dc: 1.4 m (4.6 ft)  
 Maximum length of light at 24 V dc: 3.0 m (9.8 ft)  
 Maximum length of light at 30 V dc: 3.1 m (10.2 ft)

**Spacing Criteria (SC)**

The spacing criteria is the fixture-spacing-to-mounting-height ratio and aids in laying out a pattern of fixtures. Multiply the spacing criteria by the mounting height to get the maximum fixture spacing that still provides even illumination (no shadowing between fixtures).

$Luminaire\ Spacing = SC \times Height\ to\ Illuminated\ Plane$

The mounting height is the distance from the fixture to the surface you are lighting.
